

Refuge of Sinners Interview Palevsky

Tue, 8/2 7:49PM 1:40:40

SUMMARY KEYWORDS

vaccine, children, people, shots, doctors, injection, parents, virus, called, happening, vaccinated, poisoning, watching, vaccinations, elizabeth, nanoparticles, question, illness, maiming, stop

SPEAKERS

Dr Lawrence Palevsky, Elizabeth - Refuge of Sinners Host, Fr. Robert Bossini

- F** Fr. Robert Bossini 00:09

Dear friends welcome to our channel refuge of sinners into our series, politics, science and faith. Our guest tonight is Dr. Palevsky pediatrician. And he will be speaking to us tonight. Please enjoy, thank you
- E** Elizabeth - Refuge of Sinners Host 00:48

welcome to our channel refuge of sinners. Today we have Dr. Lawrence Palevsky. Welcome, Doctor.
- D** Dr Lawrence Palevsky 00:54

Thank you. It's a pleasure to be here.
- E** Elizabeth - Refuge of Sinners Host 00:57

Um, Dr. Palevsky is a New York State Licensed pediatrician. And he has been practicing medicine for 35 years. He was also a past president of the American Holistic Medical Association. That's right, isn't it? That's correct. Can you give us a little bit of your working background prior to
- D** Dr Lawrence Palevsky 01:15

COVID. So thank you for that introduction. I graduated in an American medical school at NYU New York University Medical School in 1987. And I did a regular pediatric residency at the Mount Sinai Hospital in New York, from 1987 to 1990. And then one year of a little extra fellowship training in outpatient and emergency room pediatrics. And for the first nine years

after I finished my training, I worked in a pediatric emergency room, I ran a pediatric intensive care unit, I went to high risk deliveries, I took care of very sick newborns in the neonatal intensive care unit. I worked on the inpatient Ward, with residents and medical students taking care of hospitalized children. I taught medical students and residents in other areas of the department. I had a clinic of my own on the affiliated with the hospital. And then in the year 2000, I started working in private practice doing what's more, what's pretty much named a holistic, integrative Pediatric and Adolescent practice. And I've been doing that for the last 22 years or more.

E

Elizabeth - Refuge of Sinners Host 02:33

Okay, great. That's, um, it's a great background. And it's, it's, I'm very soon talking to you, because I feel like you've got that, that to overview of what's been happening in pediatrics for 35 years, and you've got that emergency background as well as private practice. So that's, that's gonna be great for our questions. thank you. Are these COVID-19 gene therapy vaccine safe and effective for children of any age? In your opinion?

D

Dr Lawrence Palevsky 02:58

Well, the first problem with answering a question like that is these are not vaccines. And when you look at a product that they're calling a vaccine, one needs to ask the question, what technology are they using in these injections? And has that technology ever before been used in a vaccine at all? And the answer is no. So not one of the technologies of these so called COVID injections, has ever been used to reduce an infectious illness to protect you from an infectious illness for to reduce any death from an infectious illness. So in order to understand whether this technology is effective as a vaccine, we usually need 710 or even up to 15 years worth of research as to whether or not this specific technology functions the way we need a vaccine to function, which is to protect you against an infectious illness, to reduce deaths, to reduce hospitalizations, to reduce severity of illness, to stop you from carrying the virus and to stop you from transmitting the virus. And when this injection came out, the people who were in charge of selling you this injection actually told you the following. We don't know if it'll give you an antibody against the virus. We don't know if it will protect you from getting the virus infection. We never even tested whether or not in the trials, it reduced severity of disease. It reduced hospitalization, or reduced death. We don't know if it'll stop you from carrying the virus, and we don't know if it'll stop you from transmitting the virus, by definition, they told you, we don't know if this will function as a vaccine. Here we are about 16 months later. And we still have the same statements to say, this injection does not necessarily give you an antibody against the virus, this injection does not necessarily protect you from getting the viral infection. This injection does not reduce severity of illness, and it does not reduce death from an infection. And they tell you point blank, this injection does not stop you from carrying a virus or transmitting the illness from one person to the next. So by definition, this is not a vaccine. And so what is it? You stated in your question? Because you may have been one of the few in the world who've actually read the patent from the companies who made these injections. They call it a gene therapy. They call it an operational system. There are even colleagues of mine who found information in the patents, where they call it a bio weapon. And here we are in April of 2022. And in November of 2020, I was asked in an international podcast, what I thought of this

upcoming injection, and I called it a murder weapon. And over the last 16 months, we have watched this injection kill hundreds of 1000s of people. And we have watched every authority who controls the narrative tell you that no one is dying at the hands of this injection.

D Dr Lawrence Palevsky 07:10

That said, what we're seeing in pediatrics, what we're seeing in children is very, very concerning. We are seeing adolescent boys have 1000s of a percent increase in developing inflammation of the heart and permanent heart damage. We are seeing children get strokes and heart attacks. And we are watching the medical system. And the governmental media systems reduce just completely take that narrative and make it normalized. In other words, children get strokes, children get heart attacks, children get myocarditis. And we are watching them completely negate the fact that these shots are contributing to massive numbers of injuries in the pediatric population. We are watching newborn babies develop strokes and blood clots at the hands of mothers who have gotten the shot during pregnancy. And we are watching the neonatologist normalize strokes and blood clots in newborns, I worked in a neonatal intensive care unit for five years, I will tell you that seeing strokes and blood clots in newborns, was very rare. And now that it's happening more often, we are being told that it's normal. We are watching men and women who are trying to get pregnant, have trouble with their fertility at the hands of these injections. And we are watching hundreds of percent increases in miscarriages in women who have either had the shot or who have been exposed intimately to others who have had the shot. And again, we are watching the governmental narratives and the medical systems deny that any of this is happening. And let me just say that I have been watching parents for more than 30 years, speak about their experience at the hands of a medical procedure or a medical intervention. And I have watched the medical system tell them that their experience didn't happen. And we are watching that happen exponentially. Between 2020 and 2022. Yeah,

E Elizabeth - Refuge of Sinners Host 09:50

well that's you captured a lot of concepts that I wanted to bring up that gaslighting. I tell you what I kind of feel like we are paying the price eyes as a community for not having stopped that gaslighting in the past and now it's happening on steroids that after speaking to Mary Holland and Barbara I feel like you know, because they're they were fighting the older vaccine war. And you're talking about gaslighting in general, I guess. But I feel like we're paying the price for not having stood

D Dr Lawrence Palevsky 10:21

up. Right. That was That's well said. I met Barbara loe Fisher in 2003. In person, I met her in 2000 at a conference, but I met her in person in 2003. And I have heard the stories before I knew that there were stories. And when people have asked me, Why do I think this is going on? This is what I've said, for over 60 years, parents have been screaming at the top of their lungs, that their children have either died, or have been maimed or severely injured at the hands of childhood vaccinations. And no matter how loudly they screamed, no matter how loudly they spoke, they were gaslighted. They were told no, you don't know what you're talking about. No, that doesn't happen. No, the shots don't do that. No, the studies say otherwise. No, the doctor

said that's not possible. No, my sister is a doctor. She says no, that's not possible. And the thing is, is that Congress heard the stories, the media heard the stories, the medical doctors heard the stories. And for whatever reason, it wasn't loud enough. And so now, what we're seeing is the true sacrifice of children in the world. And what we're seeing is parents who are blindly going to have to scream so loudly, after blindly giving up their child to these authorities, because there's a blind trust. And if you ask any of the mothers and fathers and grandparents and aunts and uncles and cousins of these families where the kids either died, but were severely maimed. They will tell you that no one listened to them. They will tell you that they thought vaccines were safe. They will tell you that they knew not to question or ask about safety. And even if they were asking about safety and questioning, they allowed the doctors to say to them, don't worry, they're safe. We wouldn't do anything to harm your child. And they went ahead and gave their children the shots. And the doctors, even if they said, Yes, we think this shot or the shots hurt your children. They would never write it in the chart. And they would never testify publicly that those shots injured or killed those children. And so the parents who watch their kids either die or get named, walked in with a trust. And they had to deal with the tremendous guilt, shame, anger, pain, regret, failure that went along with trusting and not having done their own homework. And so here we are today. And as you called it, it's on steroids. We're going to watch unfortunately, parents surrender their children, to these authorities, and it's gonna get loud, Elizabeth, and it's gonna get loud, because they're going to turn around and say, Why didn't we know? Why didn't we know. And I think the greatest part of this war, which to me, has always been about a spiritual war is the fact that we have been worshipping false gods and false idols for far too long. And they come in the form of the media, of social media, of royalty of Hollywood in America, of doctors, and of scientists and the government

D

Dr Lawrence Palevsky 15:00

And what we're finding is that this is a spiritual war where we need to return to our inner authority, we need to remember where our trust comes from, and where our intuition drives us, and messages us, and where that information truly comes from. Now, whether you call it God, or the universe or spirit, or a higher power, to me, it's all in one in the same. But we have forgotten the laws of nature, we have forgotten the laws of God, we have forgotten the laws of the universe. And we have outsourced much in the way the people on earth did before the flood that took out the entire world's population, except for Noah and his family and the animals that he put on the ark. And so we are rekindling history. And we are finding that we may not get a flood as God had promised us do to the rainbow that we would not get another flood. But it's very likely that this this volume is going to be so excruciatingly loud when we realize not only what we're doing to children, by giving them this shot, which is not a vaccine, but by what we've been allowing ourselves to do to children for decades, by giving them any of the childhood vaccines. Because when people really start to learn that the childhood vaccines have never been studied for safety. And that the ingredients in the shots have never been evaluated for injection into the human body to see what they do once they're injected into the body. And that every company that makes these shots, has full immunity to any liability for any wrongdoing, for any contamination for any killing that they engage in. And that these companies that are making the shots before 1986, were getting their butts whipped in court, with millions of dollar payouts for damages regarding their childhood vaccines that were hurting and maiming and killing kids. And that hurting and maiming and killing didn't just stop just because the United States government took away the majority of their liability. They're hurting and maiming and killing continued.

D

Dr Lawrence Palevsky 17:57

It didn't just go away. We just stopped talking about the fact that so many kids were being hurt and maimed and killed before 1986 That they were losing so much money in the courts. Because damages were so high based on real time cases of them being found guilty of maiming and damaging kids. And that didn't stop just because the United States government passed the law, removing the most of their immune most of their liability. And it certainly didn't change in 2011 when the Supreme Court ruled that vaccinations are unavoidably unsafe, and essentially removed the last vestiges of any liability that the vaccine manufacturers would have. And so what's going to get loud is how much the United States people and the people around the world turned their backs and turned a blind eye to what we allowed to happen. We allow these companies to make billions of dollars on products that they never tested for appropriate safety. We kept buying products from companies that were paying out millions, if not billions of dollars in fines before 1986. We kept buying products from those companies that did nothing to change any of their manufacturing products after 1986 and we kept turning a blind eye to the screams of the mothers to the screams of the fathers and to the screams of the babies and children who have been permanently damaged from the effects of the ingredients in the injections. Now in the in the United States. AIDS. We have one in five children with neurodevelopmental disabilities. We have one in 44. Children with autism. Yeah, we have an that was one in 10,000 in 1980. Yeah, that's really important that comparison, but we have one. And it's not because we're better at diagnosing it. Yeah, that's not true. We have one in 10 children with a DD ADHD. We have one in 20 children under the age of five, who have seizures. Something is happening to the brains of our children. And when you ask a pediatrician, excuse me, do any of the vaccine ingredients enter the brains of our children and inflame their brains causing any brain injury or damage? One of three things happens. One, they tell me I'm a conspiracy theorist. Or I'm anti science. Even though the basis of science is asking a question to they start to argue with me. Or three, they walk away. But the bottom line is they have never answered my question. Do vaccine ingredients enter the brains of our children. And I had been watching the health of vaccinated versus unvaccinated children for over 20 years. And I will tell you that the children who are unvaccinated don't have one in five with neurodevelopmental disabilities, or one in 44 with autism, or one in 10 with a DD and ADHD, or one in 20 under the age of five with seizures. You just don't see that in the unvaccinated children. And we have studies that demonstrate the truth of that.

E

Elizabeth - Refuge of Sinners Host 22:05

Yeah, I saw one that came out recently. I can't remember who published it was at children's house defense is the first time I've seen a really good report.

D

Dr Lawrence Palevsky 22:12

So it was it was published in 2021. Okay, by Paul Thomas, who's a pediatrician, along with a scientist named James Lyons Wyler. Yep. And as a result of that study being published, yeah, we tell you that study could not be challenged. It was airtight in its methodology, in its statistics in its analysis, and its conclusions. And as a result of that study, the medical board in the state of Oregon and the United States suspended Paul Thomas's medical license. Ah, so because he told the truth. And he showed that vaccinated children are across the board healthier. And so

do vaccine ingredients enter the brains of our children? The answer is anyone who can read a dictionary who can read a package insert. Anybody who can read basic scientific studies can tell that the ingredients that are in shots directly allow for the ingredients in vaccines to enter the brain and cause brain damage. Okay, so that's,

E Elizabeth - Refuge of Sinners Host 23:39

I'm glad you brought that up. So that's the old cotton, the old charts and I think you're talking about things like just to throw some ingredients out there. Are you talking about things like aluminium mercury, so that other one Tim has a role? There the main ingredients you're talking about?

D Dr Lawrence Palevsky 23:54

aluminum, aluminum is a nanoparticle. And it's the adjuvant in the bacterial vaccines. And aluminum as a nanoparticle can enter the brain. And aluminum is a non essential mineral, which means the body doesn't need it, and function and no study has ever identified or traced what happens to the aluminum nanoparticle. Once it's injected into the body. Where does it travel? Does it get into the brain? Does it get into the liver? does it damage the pancreas does it get inside the cells? And yet, the science of nanoparticles is very clear. nanoparticles can pierce the blood brain barrier and get into the brain. And the tragedy about this Elizabeth is that the bacterial antigens, the pieces of bacteria that are in the bacterial vaccines have to bind very, very A tightly to the aluminum. And so if you're going to get the aluminum passing across the blood brain barrier into the brain, it's going to carry with it the bacterial pieces and the bacterial antigens. And that's the danger, not just the aluminum, but anything that attaches to the aluminum in the injection that can potentially cross the blood brain barrier. It's going to cause brain damage, whether you see the effects of it or not. And that's the problem. Okay, is that brain damage is happening as long as aluminum can get across the blood brain barrier, which it can because it's a nanoparticle brain damage will happen, even if you don't see it, in obvious symptoms in the kids.

E Elizabeth - Refuge of Sinners Host 26:02

So this would have been a pharmacokinetic studies, is that what you would have wanted for the tour,

E Elizabeth - Refuge of Sinners Host 26:07

you know, to take a radioactive chemical? Yeah, attach it to aluminum. Yeah, that's vaccine injected into the body. Yeah. and trace it,

E Elizabeth - Refuge of Sinners Host 26:18

right. And you could do this in a rat to start with, oh,

D Dr Lawrence Palevsky 26:24

that's how I know this happens, because it's been done in the animal studies. So that's why I'm saying all it takes is someone who can read basic science. Yeah, these studies have already been done.

E Elizabeth - Refuge of Sinners Host 26:40

And this is so important. I mean, obviously, I don't want to I don't want to trivialize the damage that was done prior to 2020. But goodness me like this is exactly what's going on now with the lipid nanoparticle. And then mRNA might, I mean, I saw a paper that said that the spike protein so even if you're looking at what that current gene therapy, injection creates great spike protein they're showing in I think it was mice that the spike protein can cross the blood brain barrier and go into the brain. So here we have it again.

D Dr Lawrence Palevsky 27:11

Well, again, the lipid nanoparticle and, and I first heard in 2020, that lipid nanoparticle was one of the ingredients in the injection. All I did was go into PubMed, which is the research arm of, of our scientific literature. And I typed in lipid nanoparticles. And I found the first article that popped up was the dangers concern concerning the use of lipid nanoparticles and its relationship to the male and female reproductive systems. And in the article, the author's make mention of how lipid nanoparticles through history, have been known to cause damage to brain, heart, lung, kidney, scan, blood, and male and female reproductive systems. So they also go on to say that these lipid nanoparticles have never before been used in vaccines. So essentially, there's no safety profile, to understand what happens biologically biochemically to the body once these ingredients are injected into the body. And so when you hear your outsourced authority, who you're just listening to with bated breath, tell you these shots are saved. You're being lied to. Because if you do your own research, you will find that the ingredients in the shots, which are not completely listed on the package inserts are not safe, cause major damage and have not been tested for safety in the shots. But because for decades, the mantra has always been vaccines are safe and effective. There's no reason the masses would question that this wouldn't be safe and effective also, even though it's not the same technology. And it's takes 710 or even 15 years for true establishment of an injection as a vaccine. Yeah.

E Elizabeth - Refuge of Sinners Host 29:52

I'll tell you something. Dr. Ryan carbs. We interviewed Dr. Ryan Cole last week and Dr. Ron Cole says that limiting lipid nanoparticles Garlic, it goes everywhere. So that's, we should push some of those memes out rather than safe and effective, because

D Dr Lawrence Palevsky 30:10

the thing is, if you look at the regular childhood vaccinations, there are chemicals in there that operate in the body, almost the same as the lipid nanoparticles in these COVID injections. So

we're not getting that dissimilar side effects. It's just more ramped up because these are more toxic chemicals

E

Elizabeth - Refuge of Sinners Host 30:43

more toxic. And I'll tell you something else that I bring you up with most of the doctors I speak to now is a big question mark that's being raised over Good Manufacturing Practice GMP, because this is a new technology which you keep mentioning. So the GMP has not been bedded down yet. The whole thing has been rushed. So that's another curveball. So the products dangerous anyway, despite protein, it makes us dangerous, but then the extra curveball is how are they handling this GMP is the LMP concentration equal throughout the whole vet when they make the product? Have they got that this thing was so rushed? what someone has said to me is that the LMP could be racing to the top, the things are fragile, can't really be stirred properly. So I mean, in my head, I've got this idea. If you get a vial from the top of the vet, you're gonna cop a large concentration, you know, not that 30 micrograms or whatever it's supposed to be for the adults and the 10 for the kiddies, you won't get that you're gonna get a really heavy. I mean, this is one of the big question marks and apparently,

D

Dr Lawrence Palevsky 31:51

remember, this was never meant to be a vaccine. Yeah. Yeah, so we're talking apples and oranges. Yeah, this, this is not a vaccine, it was never meant to be a vaccine. Yeah. And when you create enough fear in the population, and you create enough false worship, worship of false gods and false idols, and fear, you're going to completely remove your own authority, your own responsibility, and your own accountability, to do your due diligence, and understand whether or not this is really safe or effective for you. And I'm, I understand it, because when you create enough fear, you bring up major trauma in people's nervous systems. And there's a saying that I've said many, many times, people can't hear that they would do anything to harm us. And that relates way back, Elizabeth, to our own early childhood trauma, everybody, pretty much I rarely met anyone who didn't have some form of early childhood trauma at the hands of an adult, whether it was physical, emotional, mental, sexual neglect, I mean, we all have this need for an authority to not hurt us anymore. And so when you create enough fear, you reignite people's old traumas. And so they are not going to be able to look with discerned I added authority, and be able to see whether or not that authority is doing right by them, because they're back in their trauma from early early on in their lives. And they're not in their adult, they're in their child. They're in their old early childhood trauma. And so they, as we know, having having done pediatrics for so many years, and worked in inner city hospitals in New York, when you're dealing with children who have been abused, neglected, violated, raped, molested, physically beaten. The pattern is that they always want to go back to their parents in hopes that the parents would love them properly the next time. And so, when you're looking at a combination of fear, and the reigniting of early childhood trauma, it's almost impossible to get a person to stay in their adult and say, Wait a second, I got to think this through. I have to analyze this. I have to really wonder whether what you're telling me is right or not. The Child Trauma would basically turn around and say I have to believe you're telling me the truth. Because that child in me, will be mortified if you're not. And so I can't revisit those early childhood traumas, again, of being lied to, and beaten, and violated. And so it's a very, very straightforward propaganda and intervention, to get people to completely just believe, whatever they're being told, unless you've done your work on your early childhood trauma, and

you look at your authority and say, You know what, I need to question you about this, or I'm not going to just blindly get on this train, that you said, you're taking me to some Promised Land, when in fact, I'm not so sure that that's true. But what we have Elizabeth is a massive psychology in the world that truly believes that they would never do anything to harm us.

E Elizabeth - Refuge of Sinners Host 36:12

Yeah, I come across that every single day. So I 100% agree with you. And, and you know, this fear this, this comes on to the subject that I wanted to ask you next, this fear has been created, because this illusion, I believe, has been created, that the children, for example, are at risk from COVID. So that's why I want to ask you, because you're a pediatrician. Do children get seriously ill or die from a current variant? And let's even talk about the Delta variant. Okay,

D Dr Lawrence Palevsky 36:41

so I'm going to throw a curveball before you get my answer. Because in my understanding of the science, this illness is not caused by a virus. This is the greatest tragedy in the entire past two years or more, that this illness is not caused by a virus. And this nasal swab does not diagnose a viral infection. And this injection is not a vaccine that does not stop a viral infection. And masks are not being used to stop the spread of a virus, because the illness is not caused by a virus. And even if it were, the masks are completely ineffective at stopping the transmission of any viral particle in the air. So the fact of the matter is that in 2020, when when the initial cases, true cases, not nasal swab diagnosed cases, but true physical symptom cases, were starting to come out about at least in New York, children, were going unscathed. Okay, we barely saw children getting sick. We predominantly saw people who really got symptoms, who are elderly, or who had what's called co morbid symptoms, or comorbid conditions. Now, upon this beginning of symptoms and adults, children weren't getting it. But then all of a sudden, we started seeing children get something called multi system inflammatory syndrome, fine, multi system inflammatory syndrome, mis dash c. Because they initially said, these children are getting this strange, inflammatory condition in organs all over their body, including their hearts. They were getting inflammation of intestinal organs, of abdominal organs of joints of the skin, legs and the arms. And because everything else was COVID, the medical community decided that these multi inflammatory system conditions must also be caused by the virus. And we were seeing populations of PDF children who are getting this nasal swab and because the doctors were utilizing nasal swab, as the, you know, definitive way of understanding if this was the viral load Listen, only 50% of the kids even had a positive nasal swab. But yet, even though their swab is irrelevant, but they weren't even looking at the fact that 50% of the kids had a negative swab test,

E Elizabeth - Refuge of Sinners Host 40:16

you mean the center the MIS kids? Right? Correct. But

D Dr Lawrence Palevsky 40:21

they were still calling it. That must be COVID. Yeah, that doesn't make sense. No, it didn't make sense. So fast forward to 2022. Because people were abusing the nasal swab. We had an

sense. So fast forward to 2022. Because people were abusing the nasal swab. We had an inflated number of cases of children who were diagnosed with COVID. And because people were not understanding what multi system inflammatory syndrome was, which is a poisoning, they, again, we're lumping these kids into COVID. So when you look at the numbers, of cases of children with COVID, and kids dying of COVID, it's very difficult to know what's true,

E Elizabeth - Refuge of Sinners Host 41:07

because they publish this still tiny right? Well, again,

D Dr Lawrence Palevsky 41:11

they're extremely tiny. Yeah. If you're, if you're able to accept and discover and research, that it's very unlikely that the condition we call COVID, is caused by a virus, then there's no reason for a vaccine at all.

E Elizabeth - Refuge of Sinners Host 41:32

So I've got now I've now got questions that mis I mean, I know there weren't a lot of cases, but it's actually not. It's not a nice disease to have. You're saying it's caused by poisoning any idea where the poisoning is coming from?

D Dr Lawrence Palevsky 41:48

Well, I'll tell you that in in April of 2020. I had a child in my practice two and a half years old, who fell in a puddle on the street in New Jersey. And within a couple of days, started developing very, very high fever. Okay, the fever lasted for seven days. She developed swelling of her thighs, hot red skin. And as the fever progressed over the days, the swelling descended down the leg, both legs, there was no other symptoms anywhere in her body, no respiratory symptoms, no intestinal symptoms, no urinary symptoms, just the skin and the swelling in the lower extremities. And as the fever progressed, what was red and swollen at the top of her thighs disappeared, only to be replaced by red and swelling, lower down the leg. And each day progressed down to the feet. Now I sent her for a cardiac echo. And her Echo was normal because at that time, we were worried that kids were getting something called Kawasaki disease, which is a dilation of the coronary arteries. So swelling of the coronary arteries. And she was the only person in her family that got sick. Our older sister did not get sick. Her mother did not get sick. Her father did not get sick. Her babysitter did not get sick. Her family members who saw her did not get sick. And all she did was fall into a puddle on the street. Now, over the two years, there are people who have been concerned that material has been coming from the sky that is poisoning us air pollution and things in the air. I don't know what was in that puddle. But I remember saying to the parents in April of 2020 It's got to be from the puddle because no one else in the family is sick.

E Elizabeth - Refuge of Sinners Host 44:15

Yeah, that's definitely you're gonna tell me now that this child has had a COVID Positive swap.

Is that what happened? I never

D Dr Lawrence Palevsky 44:21

I never had her tested. Okay, never had her tested. I sent her for the cardiac echo. Yeah. And as I do a lot in my practice, I work with other practitioners. And I had her see the acupuncturist, who with whom I've been working for over 20 years with children. And we both concluded that this was some kind of poisoning, some kind of multi inflammatory syndrome that looks like a clinical condition called serum sickness. And serum sickness usually happens in response to one or more chemicals that the body was exposed to, that caused a very, very strong immune reaction to fight it. And that's what multi system inflammatory syndrome appeared like. And she had no respiratory symptoms at all. And a lot of kids who are getting multi system inflammatory syndrome have no respiratory symptoms at all. And yet, what are we calling this SARS Severe Acute Respiratory Syndrome. And that's not what we were seeing in pediatrics. So I'll review. This is not even the adults who are getting sick. We're not getting an illness that looked like a viral illness. It did look like a poisoning. I will tell you, I had the illness in April of 2020. And I will tell you, it felt like a poisoning. I have been working with families in my practice with the adults in the practice, I will tell you, what they presented with look like a poisoning. They did not have Severe Acute Respiratory Syndrome. So it was clear to me from the very beginning, that this illness did not present like a viral illness. It presented like a poisoning. And our medical colleagues decided that because the authorities said this has to be a virus. They walked away saying with a parrot. Alright, this is a virus and just kept going. Without identifying what else could be causing the kinds of symptoms we're seeing. Do you

E Elizabeth - Refuge of Sinners Host 46:58

feel that you see any clues though, with you know, we've interviewed a lot of doctors, and I know a lot of people here who've treated this illness with you know, ivermectin, hydroxychloroquine, western Colorado force. Does that make any sense to

D Dr Lawrence Palevsky 47:14

you? Sure. I remember. I remember how it was treated in New York when I first got sick. And how I was watching doctors around the world and in New York treat patients. But this was even before they were using ivermectin hydroxychloroquine was used first. Yeah, yeah. When I was asked last year, why do I think doctors knew about using hydroxychloroquine? I said, Well, Anthony Fauci published an article in 2005. Basically saying hydroxychloroquine is the treatment for SARS one. And so doctors being doctors went into the literature and said, Wow, we might as well use it. And then what was happening, Elizabeth, is that doctors were seeing their patients get better within six hours. Yeah. So within eight hours, and the they were gaslighted as well.

E Elizabeth - Refuge of Sinners Host 48:15

Yeah. So what I'm asking you though, is the doctors are proposing this encounter fours are working because they're going into the cell, and they're stopping the virus from replicating. But if you you with your theory that it's actually poisoning, and there's no virus in there. How is

if you you with your theory that it's actually poisoning, and there's no virus in there. How is that? What is that? I'm just asking, you might not know, but what would be the mechanism of H CQ? Hoping you? Can you see that? That if it was poisoning? How did help H CQ help

D

Dr Lawrence Palevsky 48:40

you? Well, again, again, nobody has definitively identified the direct cause of this illness. We are told it's a virus. But when you first see people who are getting sick from this illness. I was saying, wait a second, I ran a pediatric intensive care unit. Elizabeth, when you see a patient who presents with low oxygen, but he's has a normal carbon dioxide. You have to know why does that patient have a low oxygen content? It's either because there's something affecting the lungs, or there's something affecting the blood. And because the carbon dioxide was normal. We were concluding very early on in March, April and May of 2020 that there's something happening to the blood of people who are getting sick. Okay. And so, when I saw that this was truly a blood disorder and not a respiratory disorder, And then I saw that people were starting to get better with hydroxychloroquine. Yeah. One of the first things I asked was, Is this a parasite? Could a parasite be affecting the body? Because hydroxychloroquine treats parasites, yes. But nobody did the proper investigation, we just decided, oh, it has to be a virus. And the fact of the matter is, when viral infections happen in our body, how do the symptoms present, they present with material coming out of the body. Your nose is dripping with mucus. Your airway is coughing up lots of mucus, you're vomiting, you're having diarrhea, you have a productive cough. If you do lose taste and smell, it's because you're so congested that you can't breathe, to smell and taste. But this illness was not an outwardly moving illness. This was an inwardly moving illness. This was a poisoning. This was a dry cough. This was a tight chest. This was oxygen going down with carbon dioxide staying normal. That's a blood disorder. Late in 2020, the literature finally started publishing SARS cov. Two, which it really isn't a virus, but SARS cov. Two is not a respiratory illness, it's a blood disorder. So this was six to eight months, after many of us were starting to say, this is not a viral illness affecting the lungs. This is a poisoning. My colleagues in homeopathy, my colleagues in Chinese medicine, my colleagues in herb ology, my colleagues, some not many in medicine, were saying, this is behaving like a poison. Even the people who are getting the illness, were saying, this is behaving like a poison. But because the authorities said it's a virus, we decided it was a virus. But we never established any understanding of how a virus would cause all of these problems. Loss of taste, loss of smell, dry cough, blood disorder, oxygen dislodging from the red blood cells, fatigue, body aches, clotting in the blood, hypertension, these were all things that we were seeing from the very beginning. And doctors who were saying, wait a second, this isn't presenting like a virus. Do you know what happened to them? They were fired, censored and removed from their jobs. So we were onto something. Yeah. And for the last two plus years, we've been making people afraid of a virus, when in fact, this is not what a virus does. And we have wasted time trying to understand what really was making people sick. And that's when you start to see more of the global plan, the stuff that's going on in the world. And then you start to see that there have been governments and peoples all over the world for centuries, for centuries,

D

Dr Lawrence Palevsky 54:03

putting poisons into the air, the food, the water, to sicken and kill different populations. And so that's biblical. Yeah. It goes back to Biblical times. It goes back to the early 13th 14th 15th centuries, and even the 20th century and the 21st century. And we refuse to even look at the

fact that this is not a virus. This is not how viruses behave. This is not a vaccine. This is not how vaccines are made. This is not a respiratory illness, it's a blood disorder. And then the injection is making people sick on top of it.

E Elizabeth - Refuge of Sinners Host 54:56

Pfizer Moderna are applying to have these Gene therapy less common gene therapy injections authorized for the under fives. Now why? It's completely nonsensical, obviously. But just why you've had something to say about this, why are they pushing it for the under fives? Okay, so number

D Dr Lawrence Palevsky 55:13

one, children have never been in high risk for dying from this set of symptoms, their recovery rates are close to 100%. And the reason I went through all the multi system inflammatory syndrome earlier, and the use of the PCR tests earlier, is because childhood cases have been inflated. So you'll hear people say, that's not true, Dr. Larry's just conspiracy, he's doing pseudoscience. Because look at all these kids who have died from COVID. Look at all these kids who've had COVID. Like, wait a second, you're not looking at that you're not teasing through the analysis of the PCR test. And you're not teasing through the analysis of multi system inflammatory syndrome. And realizing that this can't be COVID This can't be a viral moments. In any case, children are surviving as close to 100% as you can possibly get with this condition. And yet, and the shot, they've demonstrated that the shot doesn't stop transmission of the illness. Right? I'm not even gonna say of the virus, but just transmission of the illness doesn't stop it. So why would you need a mandate for a shot, that doesn't reduce the transmission of the illness? What what would be the purpose of mandating a shot for kids, if they recover almost 100% of the time, if in the trials, you're actually seeing massive injury, and problems in children, and if they're showing no effectiveness, because it doesn't stop the transmission or reduce any ailments. And this is where you might want to go down a rabbit hole, Elizabeth, because in the United States, if the manufacturers of the shots can get the shots on the childhood vaccine schedule, and it gets approved, not authorized, but approved, then the vaccine manufacturers will maintain full immunity to any liability. And they stand to make a boatload of money doing it. Even though you have no safety, poor efficacy, and almost 100% survival. And yet you still have parents who are anxious to give their children this shot. Yeah, that's why I said earlier, it's going to have to get really loud. And that's unfortunate, because I'm cringing knowing that, that if this does Nigerian say if when our government caves to authorizing this shot for children below the age of five parents are going to be sacrificing their kids to the whatever worshipers they are. And we're going to watch mayhem. Yeah. And when you say can I just pick up on one point? It's the full approval of this under five shot that matters or even the EUA once the emergency you have to start with the EUA? Yeah. So it's it becomes when once it's authorized under the EUA. It's just a matter of time before the FDA gives it approval,

E Elizabeth - Refuge of Sinners Host 59:17

and then they have the immunity thereafter.

D

Dr Lawrence Palevsky 59:21

Correct. And so that's the first step. The first is getting it into the schedule. Yeah. And getting people used to getting it into the schedule. And then once that happens, and you declare another emergency somewhere, or you create another storm of people getting sick by poisoning them yet again. Then you have this rush, oh, I'm gonna get my kid the shots. And then you're gonna be able to approve it. And then you know, you have full immunity. Yeah,

E

Elizabeth - Refuge of Sinners Host 59:56

I think the sad thing from the parent perspective the The sad thing about, I think there's two parts to this fear one part they've been, they've been sold a slide that their child's at risk of getting some serious illness from COVID, which is nonsense. But the second part of the lie is that they think they have to vaccinate the kiddies to protect them, the adults and even more grandma and grandpa, who are at higher risk of getting hurt from COVID. So we're using our kids, what we say in Australia is we're using our kids as human shields to protect the old blue, which is

D

Dr Lawrence Palevsky 1:00:30

the tragedy, and what you just said is that we have used the myth that when you get a vaccine, you no longer are able to transmit the bacteria or virus that you've been vaccinated against. And that narrative is a lie. And as long as you create that story, enough in the population, you're gonna have people believing that, number one, if you get vaccinated, you're immune. And there's no even there's not even a guarantee that when you're vaccinated, you're immune. That's not a guarantee. But people walk around thinking, I'm vaccinated, therefore, I'm immune, that narrative is false. But let's say they are immune. They don't stop carrying the bacteria or virus in their body. It doesn't make the virus or bacteria disappear from their body, such that they can no longer be transmitted to others. That's not how vaccines work. But the narrative has said, that's how they work. And so people have been walking around saying, well, whew, I got my child vaccinated. So my child is not at risk, they can't transmit the germ anymore. Who said, that's never been proven as science. And we are, we are just watching just this loss of brain function. And just a huge acceptance of whatever the authority says as being true. And so you'll watch parents walk around saying, Well, yeah, my child is my child is vaccinated, so he can't, he can't get you sick anymore. Why? Did your shot in your kid make the virus or bacteria just disappear? Because you actually believe that? Because then you believe that the kid who didn't get the vaccine, somehow must be carrying the germ and make your kid sick? Well, how's that work? How can you be my kids vaccinated is not going to get sick, not going to transmit the virus or bacteria. And then an unvaccinated kid comes along and says, now you're afraid that that kid has the germ. What that makes no sense. And you just walk around speaking it like you've, you've owned that information, because you've done your research. And you don't know anything. Because,

E

Elizabeth - Refuge of Sinners Host 1:03:18

you know, the sad thing that I actually read quite a bit of that phase three document that Pfizer produced, they phase three trials, and they say very clearly, in plain English, you don't need to

be a scientist to read it. That transmission

D Dr Lawrence Palevsky 1:03:30

wasn't tested. They were honest. That part was honest. So I said,

E Elizabeth - Refuge of Sinners Host 1:03:37

I said it earlier, it's there in black and white from what's the document published, like November 2020. On the internet for anyone to look at,

D Dr Lawrence Palevsky 1:03:47

and what's even what's even more interesting, interesting is a choice word. But in November of 2020, the inject the manufacturers of these injections, handed to the FDA, which is the Food and Drug Administration in the United States, all of the data around the side effects that they tabulated during the trial. And the FDA took that all those side effects and put them under the drug into the drawer. And so then in 2021, people were getting all the side effects. And if you take out the list that the injection companies gave to the FDA, people were getting exactly what they knew they were gonna get and the FDA just shoved it under the drawer.

E Elizabeth - Refuge of Sinners Host 1:04:45

Yeah, it's extraordinary. So I want to ask you something that because we have a problem in Australia with what doctors can and can't say their patients, so I've heard you say that not many Give your patients who are regular patients that your practice your children that come in, get the COVID vaccinations, and I'm going to make take a wild guess and say, I'm assuming that you're giving their parents informed consent. And you're explaining to them, you know, you're advising them, it's not wise to give your child of COVID-19 vaccination. So are you able to do that? You know, in our country, we can't add up just can't do that?

D Dr Lawrence Palevsky 1:05:25

Well, I'll say this, Elizabeth, what your last. The parents in my practice, are smart enough to not even think about giving their kid the COVID injection. They know just as much as I do, or more, because they're listening. They're reading, they're thinking, and they're analyzing. And so I don't tell them what to do. But they automatically know. Yeah, not to do it. That's been

E Elizabeth - Refuge of Sinners Host 1:06:01

part of an education process. I don't want to drop you in it. But I'm just assuming that's been part of an education process, because they're your regular patients. So you've guided them and in the past, is the sort of conversations we've been having about vaccines in the past, you've

created that knowledge you've helped them, you must have guided them, because if they're not doctors or scientists, how did they work it out?

D Dr Lawrence Palevsky 1:06:21

Correct? Well, I will tell you that more lay people know more about vaccines than doctors and scientists, yes, getting that way. So I'm not kidding. And that's what makes doctors so infuriated when patients walk into their offices and start questioning them. And the doctors throw them out. Because how dare you question me, I know everything. And then the parents bring them information that they don't know about, and they get thrown out. I don't tell patients in my practice, what to do. You see the paradigm of healthcare is changing. And I have started this change for at least two decades. My job as a physician is to be a teacher, right? If I tell you what to do, or if I tell you what not to do. I'm not teaching you, I'm getting you to obey.

E Elizabeth - Refuge of Sinners Host 1:07:23

Yeah, that's excellent. That is excellent advice. I've been telling everybody that I know, we've got to start becoming our own doctors, we'll learn from you guys. But we've got to stop being decision makers, we got to start researching. And then

D Dr Lawrence Palevsky 1:07:36

right, so the alternative choice is, I'm gonna give you informed consent, I'm gonna give you the information that you are looking for, to make as great a decision as possible. Just like if you go to buy a house, you hire an inspector, to tell you all the things about that house, that you may not be aware of. So that you can decide whether that's a valuable house for you to purchase. The way it works in this country in the United States, and in the world, essentially, is, you don't need an inspector to inspect your house. If you like it, buy it. But I'm not going to tell you any of the things that you're going to be faced with. After you buy this house, I'm not going to tell you about the asbestos, I'm not going to tell you about the radon, I'm not going to tell you about the lead, I'm not going to tell you about the mold, I'm not going to tell you about the roof that's leaking, I'm not going to tell you about the pipes that are cracked, I'm not going to tell you about the showers that don't work. I'm not going to tell you anything about this house. Because this is the house you're supposed to buy. Okay, so my job as a teacher, as an educator, is to give you informed consent, and to let you know, every risk benefit that exists that I can share with you. And so I'm empowering you as a parent to be the primary care provider of your children. Because you're with your children 24/7. And I'm teaching you how to make that role and take responsibility for that role. To the best to your ability. Yeah, other. It's so important. Yeah, otherwise you're just obey.

E Elizabeth - Refuge of Sinners Host 1:09:45

Yeah. And you know, by doing that, that becomes generational, because that parents taught that child and then that child will teach their child so it's valuable.

D Dr Lawrence Palevsky 1:09:55

And so that goes back to what I said earlier about my concern for the worshipping of false gods and false idols. Just tell me what I have to do. And I'll do it so I can move on with my life. That's not the kind of practice I have. And again, I'm not the one who's going to say, do this, or else, or don't do this or else. I share information with parents. And I give them as much as I can, and answer as many questions as I can. So that they have as much of an ability to make a decision. And I'll tell you, Elizabeth, parents are more educated about vaccines than doctors and scientists, and legislators and government leaders and media mouths. Okay, certainly more educated about this, this gene therapy poised.

E Elizabeth - Refuge of Sinners Host 1:10:58

I'm gonna, I'm actually really glad I asked you that question, because I think that's what you've just illustrated is the model that we need going forward. So I love that. Listen, there's a story. I mean, I know we've already done we've talked a lot about vaccine injury. But sometimes I feel like when you talk about a case study, and there might still be people watching this show who aren't convicted that the COVID injection shots are dangerous. So I know you've told a story about a two month old child, your regular patients aren't receiving the COVID vaccination injections, but one came in it wasn't a regular shot. And I think it's actually quite impactful if you explain what you saw with this two month old child that came into your office.

D Dr Lawrence Palevsky 1:11:34

That's okay, so I saw a family with a two month old boy. And the mother had gotten the Pfizer injection a month apart. At the very early to Pfizer injections a month apart, at the very beginnings of her pregnancy, she didn't know she was pregnant. And during the, during the pregnancy, they found that there was extra water around the baby's head. The name of it is called hydrocephalus. And the baby was born. And they had to do a medical procedure to help drain the water that had accumulated inside the baby's head. That was done very early on. What was also very tragic was that the child had lost function of some of his pituitary gland. So we had to be on medication, because the pituitary gland was not functioning. And when I saw the baby, the parents weren't yet convinced or told that the shot may have impacted the health of this baby. And they really didn't want to know. When I saw the baby at two months, the baby was developmentally delayed. There was low tone in the legs, they when you picked up when I picked up the legs, they just fell down to the table. And normally at a two month old, you know, the baby's holding the legs up like this. Yeah, move. This baby's legs I picked up, fell right down. The baby also had something called Miss statments, which is a vibration of the eyes at rest, so it was just moving side to side at rest. And I could not get the baby to look directly in my eyes. And so I didn't even know if the baby could see. I had no idea. And so the pediatrician for this child did not send the parents to a neurologist about the tone and did not send the parents to an ophthalmologist about the eyes. And so it's possible that this could have been from something else. But if the child was affected by the Pfizer shots, this was one of the poor outcomes from it. And so that's the only one that I've seen. And it broke my heart actually. Because the parents, you know, mean, No parent wants to know that he or she might have done something to injure their own child thinking that they were doing the right thing, because the obstetrician said no no No, it's fine. It's fine, it's fine. And we've heard countless stories of babies who were born to mothers who got the shot, who, you know, blood clots and strokes. Babies who were breastfed by mothers who got the shot, and developed a full clotting disorder

and just bled out and died. Those are real. Those are very real. And, you know, when you start to see an accumulation of these stories, you you have to question whether the shot while the mother was pregnant, could have contributed to this issue. Yeah.

E Elizabeth - Refuge of Sinners Host 1:15:42

So this story upsets me because the mom, the big issue here is the mom, right? The mum, if the mum doesn't pursue the cause of the injury, or doesn't entertain the cause the injury, the child's further risk, because I like I think I heard you say once before that this child would benefit from other interventions. Now, if that thing in medicine is, quite often, if you don't know what caused the problem, you might not come up with the right solution. Right? If these other doctors around her this other pediatrician and her not going to neurologist, if they're trying to hide that the shot cause this, which is how I feel this is going right, then she doesn't actually get the opportunity to do to do interventions that could improve her child's quality of life. And going forward. How do we know that she's not going to take a booster shot when she's pregnant with her second child? Well, no,

D Dr Lawrence Palevsky 1:16:40

I think the the trap for a family like this is she's not going to meet a doctor who's going to say that the child's condition is related to the shots that she got during pregnancy. Because we never admit, previous to 2020, that a child's issues could be related to the shots that the mother got during pregnancy. Because remember, there there are several mantras that are there are sort of like they're automaton responses. vaccines are safe, vaccines are effective. vaccines are safe vaccines are effective. Vaccine Injury is rare vaccine injuries, rare vaccine injuries, rare vaccine injuries rare. Those are piped through the air conditioning vents. They're piped through the social media. They're piped through everything. So you're gonna keep repeating it, whether you believe it or not, because you're not going to do your own homework. Remember, the majority of people who understand the dangers of the shots, understand them, because they went through the experience themselves. And they woke up. Or they understood the experience of someone close to them that changed their life. And they didn't rely on the mantra, vaccines are safe. Vaccine Injury is rare. They actually used their own experience and the experience of others to come to a decision based on Ah, now I have to research this, because I need to figure out if this is true. And that's what the authorities have done very well to stop people from doing which is critically think critically analyze, take responsibility.

E Elizabeth - Refuge of Sinners Host 1:18:50

So I'm gonna ask you, this is an uncomfortable question, but I'm just gonna ask you this question. To the others. Are there incentives from insurance companies or the government to pediatricians or GPs in the US to administer COVID? vaccines?

D Dr Lawrence Palevsky 1:19:08

You're asking the question, because you know the answer.

E Elizabeth - Refuge of Sinners Host 1:19:11

Well, no, I've seen rumors on To be honest, I don't know that. I did try to do the research. I've seen rumors on social media. So that's not really knowing the answers. I'm being a bit cheeky, but I actually don't really know the answer. I know there's this incentives in Australia. Well, the only ones I've been able to prove, and they've been they've been quite minor financial incentives. The main incentive in Australia is you will lose your license. If you say one word in your clinic about these vaccines being unsafe. That's the main incentive in Australia. It's the stick.

D Dr Lawrence Palevsky 1:19:40

Here's how I understand it to work. The majority of physicians in this country in America work with electronic medical records. The majority of physicians take insurance the majority of physicians working with electronic medical records and insurance have all their information sent to the insurance companies and the hospital systems for whom they work. So their work is looked at and evaluated. And if they're not doing the protocol, that their hospital systems and insurance companies tell them must be done with their patients, then they can get fined or fired for not following along with the protocols set forth by the hospital systems, and the insurance companies. But that's true for almost everything. That's true for medications. Doctors have to use certain medications by protocols, doctors have to give vaccines by protocols and insurance companies. If they don't, if certain doctors don't have a certain percentage vaccination of their patients, insurance companies will flag them and even let them know that their bonuses will be dropped. This is an incentive all over the United States. I don't know how much further it is in other countries. But as long as doctors participate with electronic medical records and insurance companies, they are being watched for how they practice medicine, and whether they follow the protocols that are handed down by the hospital systems and the insurance companies. So,

E Elizabeth - Refuge of Sinners Host 1:21:51

so even doctors in private practice as well,

D Dr Lawrence Palevsky 1:21:54

right. Doctors who use electronic medical records, and participate in insurance companies are vulnerable to those potential fines that being dropped from insurance companies.

E Elizabeth - Refuge of Sinners Host 1:22:13

Because what was his bonus? You just mentioned their bonuses will be dropped the bonuses from the insurance company?

E Elizabeth - Refuge of Sinners Host 1:22:19

Correct? What is that? New out? You told me what is that? That's a polling.

E Elizabeth - Refuge of Sinners Host 1:22:26

I've never heard of that before we'll

D Dr Lawrence Palevsky 1:22:28

lose. They will they will lose their they're essentially, the the bonuses come from the practice. The bonuses come from the hospitals. But the doctors run the risk of losing being able to participate in those insurances. If they don't meet a certain percentage of vaccinations in their practice, wow. Oh,

E Elizabeth - Refuge of Sinners Host 1:22:58

what I was talking about, it's like the no claim bonus that we pay in Australia on the car. Like if we know, our accident says we have to pay extra for our Reggio every year thought or something like that.

D Dr Lawrence Palevsky 1:23:08

I've said it incorrectly, they the doctors will lose bonuses from their practice. Yep. And from their hospitals paying them if they don't meet certain requirements, but they can run the risk of being dropped from their insurance companies, if they don't follow certain percentages of vaccinations and medications being used in their practice, okay, because as long as a doctor puts down a diagnosis, they have to show that they also did this treatment and this treatment and this treatment and this treatment. That's along the protocol. And if they don't follow, they can get fined or removed from their jobs or removed from their insurance company.

E Elizabeth - Refuge of Sinners Host 1:23:58

So this was a problem for vaccination, obviously. But this is also a problem for the treatment of COVID-19. Correct was a lot of doctors were not following the CDC protocol, the CDC protocol was take a Tylenol and do nothing.

D Dr Lawrence Palevsky 1:24:10

Well, the CDC protocol and the hospital basically murdered.

E Elizabeth - Refuge of Sinners Host 1:24:13

Yes. And then is that right? Yeah, I didn't open up that can of worms. I know about your remdesivir. We have this. We have the same problem here. We have the renders of your

problem through the whole 2020 intervention.

D Dr Lawrence Palevsky 1:24:24

Sure. Sure. And now, now the FDA has authorized the use of remdesivir. For children to treat COVID. Yes, that's shocking. It's not shocking to me. Yeah, because, yeah, it's part of the plan. Now, what we have here is a toxic drug. Yeah. And it doesn't treat COVID at all,

E Elizabeth - Refuge of Sinners Host 1:24:50

no. And tell people what it does to the kidney and liver because that's what we're seeing that here.

D Dr Lawrence Palevsky 1:24:55

Causes it causes massive failure of those organ.

E Elizabeth - Refuge of Sinners Host 1:24:59

Yeah, I can't even imagine what it would do to a child. Right. But then, of

D Dr Lawrence Palevsky 1:25:03

course, if a patient on remdesivir dies because the patient had COVID and got remdesivir, they call the death COVID. They don't call it death by remdesivir.

E Elizabeth - Refuge of Sinners Host 1:25:17

Right? The giveaway here, I mean, I've had a little bit of involvement with this to give away here in Australia is once you put on remdesivir, which is an intravenous line in the arm, right? You they do blood tests every single day for five days, and they're looking at KIDNEY LIVER function. And then they make a decision after five days, whether they're going to go to 10 days, and we usually find that they're going to 10 days the patient will die. The kidney liver function, I've seen the blood test results, I've seen it change after two days. Correct. But they don't anyway, parents look okay, this is another nightmare. Something's happening. I noticed in America about parental consent for vaccination for children at school, there's been an attempt, I think, to allow children to approve, to sign up for themselves to have the COVID vaccine, and then the parents don't even find out that the child's

D Dr Lawrence Palevsky 1:26:07

had the shot. So in in 2011, in 2021, was it 20, it could have been 2020, the District of Columbia, in the United States was arquing a bill that would essentially give doctors in schools,

the ability to vaccinate children are 11 years of age and up without parental consent. Right, not only would they be able to give children any childhood vaccine, but in the bill, the doctors would not be obligated to tell the parents that the shots were given to the kids. And that the parents would receive an explanation of benefits EOB from the insurance company about the visit. But the vaccinations would not have to be listed on the EOB the explanation of benefits, so the parents would not have to know about it, the parents would not know. Because the kids would be made afraid, essentially, to tell the parents that the kids got the shot. And if the child had a bad reaction, and the parent would be looking at the kid going, well, I don't know what's wrong, because we made afraid that bill was actually passed in the District of Columbia to allow that to happen. And earlier this year, in March of 2022, a lawsuit against the District of Columbia was one striking down that bill that would take away the authority of the schools and doctors to give kids vaccinations 11 years of age and up without parental consent. And without, I mean, it would be an overt attempt to hide medical care from the parents, essentially, the state would own your child. And you wouldn't know what the state did to your children. And the District of Columbia passed this. And it was it would it would set precedents for other states in the country. But in March of 2022, there was a lawsuit from I can decide.org Informed Consent Action Network. Yeah, I can decide that all that work in the lawsuit striking down that Bill, thank God for them.

E

Elizabeth - Refuge of Sinners Host 1:28:59

I just can't understand who these legislators are. Who are these people?

D

Dr Lawrence Palevsky 1:29:03

Well, it's not the legislators doing it. You see, what's not what's not readily understood in in the world is that legislators are not being elected to represent the people. The legislators are bought by the special interests and the corporations to do their bidding. And it's been a long time, at least in the United States, where we've had a government for the people and by the people, because corporate interests have been running the United States for many, many years. And so that's how this happens. So no matter what you try, that's why for decades, parents had been screaming at the top of their lungs to legislators about the dangers of vaccines and the legislators just pass them by and legislate against them anyway, because they're not representing the people anymore. They're representing the special interests, who are either bribing them or manipulating them or both, to get them to do the corporate interests. And that's, again, that's another one of those, it needs to get really loud. for the public to understand what has been going on and what we've allowed to go on for decades, just like we have allowed companies that have been paying millions and billions of dollars for maiming and killing kids before 1986. Those same companies didn't change their safety profiles of their shots. And those same companies were being fined billions of dollars for improper studies on drugs that were killing people. And we kept buying their drugs. So how much louder? Does it have to get for people to realize that we have been complicit in this whole process, we have been purchasing products from the very companies that have been hurting us. And then more and more that they pay in fines, the more and more we keep going back and purchasing more. So it has to get really loud before people listen. And that's going to be an unfortunate ending. And I'll leave it at that.

E Elizabeth - Refuge of Sinners Host 1:31:47

Yeah. I think I've covered most of the questions I had for you, did you? I mean, you've given us a little bit of a summary there. Did you have anything else you wanted to bring up that I haven't asked or any party?

D Dr Lawrence Palevsky 1:32:01

I think we've covered it all. I mean, my, my goal, and my hope is that people hear what I said, and not believe me, then go out and do your own homework. And identify whether or not I'm coming from a truthful place. But not because you just automatically believed me. But because you took responsibility. And you were willing to look at things that were difficult to look at. And you were willing to identify things that you didn't believe could be true. And you went ahead and you did it anyway, that ladies and gentlemen is science, science is being able to take a neutral approach to something and come up with an outcome that may differ from what you previously thought. But be able to rely on that outcome. Because you have ownership of having thought it through, researched it, investigated it and figured it out yourself. And when we start doing that more and more and more, we will become an empowered world again, because there's the same when the people fear the government, we have tyranny. When the government fears the people, we have freedom. Yeah, that's

E Elizabeth - Refuge of Sinners Host 1:33:27

a great, great sign. Do you have any advice for? I often ask this if the doctors do you have any advice for the Australian doctors at the moment who are feeling pressured by our we have this organization here called the Australian health practitioners regulatory agency, and they're the ones coming down on the doctors and telling them that they can't treat you know the symptoms of COVID. And they can't you know, they must vaccinate, they must push the vaccination agenda. Do you have any advice for those doctors?

D Dr Lawrence Palevsky 1:33:55

Be very mindful of the patients coming into your office. Because sometimes those patients are plants. And they're there to try to get you to say something, or do something that you will then be reported for. So be very mindful of who you're working with. And just remember, in every war, there's an underground. And I'll just leave it at that.

E Elizabeth - Refuge of Sinners Host 1:34:28

Okay. That's great advice. Thank you very much, Dr. Palevsky. We, it's been a fascinating conversation. I've learned a lot from you. And I'm really looking forward to the feedback that we get from our listeners when they see this video. Thank you.

D Dr Lawrence Palevsky 1:34:42

Thank you, Elizabeth. And thank you for the invitation.

F

Fr. Robert Bossini 1:34:47

Difference one of the most important areas of the Bible is where the Lord asked his people to take special care of the orphan. The stranger The widow. And God mentions these three categories, because he says that you two orphans, strangers, and widows, in the land of Egypt, these three categories are categories in their society at the time, we had no rights within themselves, and they need people to speak out for them. And when we look at it, today, society still has those three categories, which we may not class them as orphans, widows, and strangers. But certainly people within our own society, we cannot fend for themselves, they cannot speak for themselves. And in many ways, given manipulated and abused by various different institutions, in areas of our own society. One such group is that of children. And as a society, we need to take care of the most vulnerable, and children are the most vulnerable, from the very moment of conception, through the birth, their upbringing, they're dependent on people to take care of them, to educate them, to form them, to love them, to nourish them. And it becomes one of the greatest crimes in our society, when people institutions organizations, abuse that. And in our world today, we can see the various different governments passing or wanting to pass laws to have underage kids vaccinated. What will be the response? If a society if a government allowed children under six to have access to any form of alcohol? It'd be outrage, people will be saying what's wrong with you? Why are you allowing our kids to be abused by the substances. And you people are just sitting back and allowing government to be pushed over by organizations to allow our kids as young as five, to be vaccinated. With all sorts of services that really we do not know, what they contain the heavenly tested, they haven't gone through the proper testing for vaccinations. And yet, this has allowed. This goes contrary to what Jesus asked, asked of us, in our treatment with children, because he's quite perceiving the Gospels. He says, Let the children come to Me. Because it is, these young children, the kingdom of heaven belongs. And he was quite adamant on that. And he stopped his disciples from stopping them coming to him. And further on in the gospels, he said, that is better for someone to tie a great millstone around the neck. And a millstone is one of those great pieces of stone that you might see in pictures of illustrated Bibles, that are usually tied to a meal, and then tied to a donkey. And it goes around and around crushing the grain. It's a stone that can't be lifted by one person, but this is what Jesus saying, it's better for someone to tie that around their neck, throw themselves into the sea, than to abuse one of these little ones. So Jesus is quite adamant. It is description of the way in which we should treat these vulnerable people in our societies, our children, we need to nurture them, to form them, to strengthen them to be true members of our society, not to degrade them, not to intoxicate them with all sorts of substances, that we don't know, their composition, or what they are doing to them. This is a great crime. And unfortunately, governments are allowing this. So we, their parents, we as adults need to speak up for them because they do not have a voice. So do friends. Let us not take this sitting down. But let's be their advocate. Let's be their voice. Let's be their strength and their support.

F

Fr. Robert Bossini 1:39:30

Because here we are risking generations of children who will be affected by what is happening now. And we will have to stand before the judgment seat of God and render to God what we have done or failed to do. And that is a crime and a sin. So dear friends, I would like to conclude the prayer to our Blessed Mother. She Who? Or the Word of God, she with the maternal heart.

Let us pray to her, for her to strengthen us to be a true support to these children, the vulnerable members of our society. Hail Mary, full of grace, the Lord is with you. Blessed are you among women. And blessed is the fruit of your own Jesus. Holy Mary, Mother of God, pray for us sinners now and at the hour of our

 Dr Lawrence Palevsky 1:40:28
death. Amen. The Lord be with you.

 Fr. Robert Bossini 1:40:34
Man, Mighty God bless you all the Father, the Son and the Holy Spirit. Amen.
